DAILY AND WEEKLY HEATING

Set the Skope to turn on to provide heat at certain times of the day, or even days of the week, using the handset's daily and weekly timer control functions.

NOTE: A 15 AMP, 60Hz circuit is required for 120V installation. Additional appliances on the same circuit may exceed the current rating of that circuit. A dedicated circuit is highly recommended to prevent the circuit breaker from tripping or possible fuse failure.
